Why are our corner guards the best?

Primarily, because we are the manufacturer; therefore we have total control over every facet of our product — raw material, fabrication, production and packaging. In our factory in Fort Myers, Florida, quality-control occurs at every step of the fabrication process. From inspection of our USA mill-sourced raw materials right up through packaging, each stainless steel corner guard is continually checked to ensure the highest quality.

Protect your facility and keep it looking new, longer with **our American-made stainless steel corner guards.**

Need more convincing?

We use only the highest-quality, commercial, architectural-grade, Type 304 stainless steel, with no sharp edges — our corner guards edges are smoothly deburred. Plus, our corner guards arrive with a vinyl film to protect the beauty of the finish. The protective film is removed after installation, exposing the stunning #4 Polish Brushed Finish.
